

## New Mexico Water Resource Atlas - December 2002

### Lower Pecos: Ground Water

Contours depict the generalized, pre-development water table. In most areas of the state, the shallow, often stream-connected water table aquifer is the best, and most commonly developed groundwater source. The map portrays water levels before significant ground water pumping occurred. The water level contour map is appropriate to identify general groundwater flow directions. The map is not intended to predict local groundwater conditions.

#### Explanation:

Monitor Well	Water Level contours	Aquifers
County Boundaries	190 ft	Carbonate Aquifer
Cities	580 ft	Shallow Aquifer
Perennial Stream	8650 ft	Captain Reef
Intermittent Stream	2900 ft	

0 3.5 7 14 21 26 Miles
